THE REFLECTIVE ABILITIES OF PERSONALITY IN GROUP'S CREATIVITY

Under individual reflective abilities we understand the ability to overcome problemity & conflictness of a situation that block creative process through realizing of stereotype, comprehension of reasons of experience and generate new whole sense of situation. The objective of the study of reflective abilities is the search how it are changing in situation of group's creativity and fixation of the influence of creative thinking in group on reflective abilities of personality. To investigate individual creative abilities during cooperative problems' resolving are used the methods of contextual functional-parametral analysis of a discursive problem resolving process.

Experimental research of juvenils is shown that common solution of creative task reorgaize the sistem of individual reflectivity: reduce of intellectual component. Active functioning of personal and interpersonal component of partner s reflection in common problems resolving provides certain conditions for compensation of intellectual component's reduce and show effective creative abilities during individual mental creativity.
