

Reflective approach to the personality.

Naidenova Lubov, The Institute of Reflective Investigation and Specialization, Kiev, Ukraine,

The reflective approach to personality based on the idea about united reflection ontology, which appeared in such sense phenomenon ranges as: intellectual sphere (the sense of logicality, criticality, productivity), "self"-sphere (the sense of the self-regulation, self-organization, self-esteem, self-development) and relation sphere (the sense of position-making, collaboration, competition, moral-ethical aspects). Three integral algorithmes are in every reflection forms: a) on the 1st integrity level: the dismemberment and the keeping of the sense image control (managaring); b) on the 2nd integrity level: the displacement and watch the images part (parts); c) on the 3rd integrity level: the creating the probable images versions and the criterial choosing from them.

We suggest the same algorithmes to describe the process of personal problem resolving: a) on the 1st level: personal realizing is the extensive reflection of the sthereoipes (such as attituds, roles and others), it is making of the immanent personal images; b) on the 2nd level: personal regulation is the intensive reflection of cause-consequence and aim-means ties, it is the conscious of the changes probability; c) on the 3rd level: personal construction is the constructive reflection of variats of the events and determination of they exists probability.

In this means reflectivity may be both as the skill (the technic, the procedure, the tool) and as the sens of personality (the value, the principle, the strategy).
